

**20 % cheaper!**  
Pipe elbows made from two halves  
Available in a variety of sizes and materials!

## BUTTING – Everything from a single source

Elbows from two halves 20 % cheaper!

Depending on the outside diameter, we produce pipe elbows without wrinkles from individual steel plates, made from two halves.

By rationalisation and optimisation we have succeeded in reducing our production costs by 20 % – and you can benefit from this!

Favourable conditions also for mitre bends

That's why as of now we can offer you pipe elbows made from two halves, in a variety of sizes, radii and materials, pickled and passivated, in tried and tested BUTTING quality and on favourable conditions.

If desired, they can also be X-ray tested, upgraded and approved with a test certificate. We manufacture larger elbows using mitre bend construction.

BUTTING – Progress by Tradition!

### Elbows manufactured

from copper, stainless steels and light alloys

Elbow diameter		Bend radii in mm
